The Object Management Group (OMG) recently released a report out of a meeting held last October between members of the information technology standards community, NIEM, and the PM-ISE.  The meeting focused on the importance of standards-based innovation as a means to accelerate the government?s information sharing efforts.

More than 40 experts from across the technology and public sectors discussed the challenges and opportunities in the information sharing world.  After several keynote presentations, the attendees were broken in to three working groups to dive deeper into specific issues.

The report out of the conference and posted on [OMG's Facebook page](#) [1] last week set forth four key recommendations that the community should take for action in its effort to accelerate information sharing. They are:

- Immediately Leverage Existing Standards
- Prohibit ?Data Lock Down
- Drive Standards
- Build Community

To see how the community intends to do this, view the [full report](#) [2] from the conference.
